Why Data Analytics is important

Data Analytics is a good choice for those who enjoy working with numbers, and solving puzzles, writes Rohini R Rao

We are living in the era of 'datafication,' technology is recording every aspect of our lives as data. People and their devices are constantly connected to the internet and an unprecedented amount of data is being generated. Data recording the daily lives of humans can be integrated, analysed, and put to social use. However, data analysis is not a trivial task, we are in a 'data-rich but 'information-poor' situation. Although a massive amount of data is being recorded in detail, the data repositories are not being used effectively. Large amounts of data, in various formats, are distributed across repositories. Decision-making is mostly based on intuition rather than information. There is a need to integrate this data, prevent information overload, and use the processed information to make data-driven decisions. There is a need for making sense of the data.

Story building

Data Analytics is the science of analysing the raw data to summarise and visualise the data. The insight into the data should help the decision-maker interpret it and make 'data-driven' decisions. The first step of the Data Analytics project is to specify the problem and the objective of the project. The objective of the analysis could be to simply summarise the data for an informed decision. For instance, the analysis could help identify customers for the next marketing campaign. The data can also be used to build predictive models or make personalised recommendations.

The team involved in Data Analytics facilitates the collection of relevant data and its exploration. Sources of data are identified or collected, data is cleansed, converted, integrated, and prepared for analysis. Tools such as Python, R, and MS Excel, various techniques are deployed for the analysis and visualisation. Data Analysts transform the data to interpret patterns and trends, which help the team translate the patterns into actionable items. Data Analysts must have exceptional interpersonal skills, in addition to technical skills like programming, data management, data analysis, and data visualisation tools. Expertise in story building, statistical analysis, data visualisation, machine learning, and a thorough understanding of cloud platforms, is expected. Data Analysts may choose to specialise in a particular domain like business, finance, or healthcare.

Essential skills

To understand the problem, and measure the outcome is crucial. While building predictive models, it is important to declare the level of accuracy of the model. Data from medical records, and patient history could be analysed to predict and quantify the risk of a particular disease. The consequences of incorrect predictions need to be quantified for effective decisions. Programming skills in Python, R, or Matlab are essential. The ability to do data visualisation using matplotlib, seaborn, PowerBI or Tableau is important.

Make a strong CV

Students must hone all the required technical skills. However, the technical tools and programming languages used for the project do not matter. Data Analytics is all about analytical thinking, finding patterns in data and how to use it in decision making. Students can acquire this skill by dabbling in projects and internships. The focus should be on putting the theory learnt into action. Students can dabble in the numerous datasets hosted online on websites like Kaggle. As freshers, students should pay attention to data pre-processing tasks like dealing with missing or noisy data and encoding and integrating data. Students can participate in playground training competitions that are beginner-friendly. Usually, the objective of the challenge is defined, and the student can work on finding the solution. They can learn from the online notebooks of experts who build industry-grade data analysis solutions. From there on the student could work on data sets wherein they can identify the problem statement, and objectives. The student can dabble in story building using data summaries, and visuals. They can also learn to make recommender systems or prediction models. The student can share their data analytics portfolio online to showcase their abilities.

Data Intuition is the most important skill that a data analyst must have to excel

(The author is programme coordinator, BTech Data Science & Engineering, Department of Data Science and Computer Application, Manipal Institute of Technology, Manipal Academy of Higher Education)

A career in Artificial Intelligence

The Department of Computer Science at Cork Institute of Technology supplies talented graduates for the growing roles in computer science

Praveen Joshi

"I really wanted to understand more about Artificial Intelligence and how these different technologies worked," says Padraigh Jarvis, student in the MSc in Artificial Intelligence at Cork Institute of Technology (CIT). "When I heard CIT was starting a masters in that field, I applied right away."

Artificial intelligence (AI) is a field of computer science that enables computers and machines to perform tasks normally requiring human intelligence. Its many applications range from chess-playing robots and autonomous cars to speech, image, and language processing, robotic manufacturing, and surveillance systems.

"The college does a fantastic job teaching students how to apply different aspects of AI to very practical situations and uses real-life data. This gives students a great interest in the topic and can also help with graduate employability."

The AI programme at CIT produces AI engineers with a highly relevant skill set in AI topics. The programme has a practical, hands-on approach to learning, where all modules are fully assessed using continuous assessment methods.

World-renowned course

The AI programme at CIT has modules in Machine Learning, Knowledge Representation, Metaheuristic Optimisation, Big Data Processing, Research Practice and Ethics, Natural Language Processing and much more. The programme is delivered part-time online over two years and is also delivered full-time by day over one academic year.

Praveen Joshi is from India and is a current MSc student in AI at CIT. He says he searched for renowned institutions inside and outside of India and found CIT to fit the course he had in mind.

"The modules in the course were perfectly aligned to my needs," says Praveen. "Apart from the coursework and modules, CIT provides everlasting support to its students with its knowledgeable and helpful staff.

"Choosing CIT was one of the best moves in my life and it has helped me stand out from the crowd because of the knowledge and reputation of the institution. I would recommend the course to anybody who wants to pursue their career in AI with an MSc from a world-class institution with global exposure."

CIT offers a comprehensive suite of fully online Computer Science programmes. All online programmes are delivered and accessed fully online using state of the art cloud-based technologies. Lectures are delivered online by night, streamed live over the Internet and recorded to facilitate easy playback to students.

The MSc in Artificial Intelligence is just one of the online programmes delivered by CIT. Other courses include the MSc in Information Security (which is also delivered on-campus), MSc in Cloud Computing, MSc in Information Design and Development and MSc in Software Architecture and Design.

At the end of the presentation we are likely to have a deeper insight into the following questions:
What symptoms arouse the suspicion of breast cancer in a female
what are the clinical signs suggestive of breast malignancy
How to differentiate between a benign & malignant breast lump
The importance of history n examinations in diagnosing a breast cancer
The role of self breast examination

Jan 29 2022 Mahindra Pride Classroom 15 Days Onilne Training

Naandi

Mahindra

MAHINDRA PRIDE CLASSROOM

Employability With Empathy And Emotion

Naandi

Naandi, which in Sanskrit means a new beginning, is one of the largest and fastest growing social sector organisations in India working to make poverty history.

Naandi has been partnering with various state governments, corporate houses, international and national development organizations and showcasing large scale successful delivery of public services. Services such as elementary education with positive discrimination of girls, safe drinking water and sanitation, large scale cooperative irrigated farming in dry land areas, end-to-end sustainable agriculture in tribal areas, skilling and employment for youth.

EMPLOYABILITY WITH EMPATHY AND EMOTION

Since 2016, Mahindra Pride Classroom (MPC) has been rendering yeoman service to final year students of Government Engineering Colleges/Polytechnics and ITIs across 19 states in the country. We try and enhance their employability prospects manifold via a 60 to 120 hour carefully designed module. Thus far, 6519 MPCs has empowered over 287000 youth with the skills needed to get a job – and we have also been placing a significant number of them through our many JOB UTSAV's with reputed employers. The complete costs of the training and placements are underwritten by the Mahindra group as part of their CSR contribution.

The MPC team strongly believes that basic education is not enough when students step out into the world. It is imperative for young adults to be equipped with essential life skills and soft skills. While certain skills may be acquired through everyday experience at home, school or college, they are not sufficient to adequately equip the youth in today's complex society.

Realizing the necessity and urgency of reaching out to many more students and young adults, who live in the interiors of our vast country, Mahindra Pride Classroom is extending its expertise by training youth in government colleges and institutions.

MPC AIMS TO HELP STUDENTS TO:

- Develop an identity and improve their self-esteem
- Manage emotions and overcome obstacles
- Build relationships and polish their interpersonal skills
- Enhance and improve their employability skills
- Improve personal and professional effectiveness

विदेश जाने के लिए एजेंटों के चक्कर में न फंसे : डा. शर्मा

संवाद सहयोगी, बरनाला : श्री लाल बहादुर शास्त्री आर्य महिला कालेज में कालेज प्रिंसिपल डा. नीलम शर्मा की अगुआई में सेमिनार लगाया गया। प्रिंसिपल डा. नीलम शर्मा ने आए विद्यार्थियों व अभिभावकों का स्वागत करते हुए विद्यार्थियों के उज्जवल व बेहतर भविष्य की शुभकामनाएं दीं।

उन्होंने बताया कि विद्यार्थियों को एजेंटों के धोखे में न फंसकर अपनी पूर्ण योग्यता सहित अप्लाई करना चाहिए। इस संबंधी पहले जानकारी हासिल करना लाभदायक होता है। उन्होंने विद्यार्थियों को सचेत करते कहा कि आइलेट्स की कक्षाओं के साथ-साथ किसी न किसी कोर्स में दाखिला लेकर अपना वर्ष गंवाने से बचना चाहिए।

प्रो. मोनिका बांसल ने विद्यार्थियों को सुचेत करते कहा कि विद्यार्थियों को सही समय व सही फैसला लेना चाहिए। प्रो. हरजिंदर कौर ने विद्यार्थियों को कार्य प्रमुख कोर्सों की जानकारी दी।
